

This charming solar powered garden light is the perfect decorative piece for any garden and is so simple to set up and maintain.

### Features:

- Solar powered: Charges during the day and illuminates at night.
- Incredibly simple to use: Single switch operation.
- Automatic activation: The daylight sensor keeps the light off during the day and activates automatically during darkness.
- Weatherproof: IP44 rated, perfectly suited to outdoor use.

### Operation:

- Single switch on the base of the lamp. Move to the 'ON' position to activate.
- Please ensure the unit has open access to sunlight.

### Specification:

- Protection class: IP44
- Active time: max. 6 h with a fully charged battery

### Troubleshooting:

- **Light is not automatically activating:**
  - A nearby light source may be interfering with the daylight sensor. Please ensure the unit is placed in darkness to activate.
- **Light not staying on/only activating for short periods:**
  - Due to the nature of solar power, the light will receive a varying amount of charge depending on the weather. Please note that during periods of low light the lamp may not stay on for the full amount of time.
  - For long periods of low sunlight, it is possible to charge the batteries manually. The rechargeable AAA battery can be charged in a commercially available charger. To remove the battery: Turn off the unit, unscrew the battery compartment, remove the cap & gasket and remove the battery for charging/replacement. Once complete, replace the cap and screws and switch the lamp back to the 'ON' position.
